PROFESSIONAL SUMMARY

Full Stack Web Developer building products end-to-end with PHP / Laravel backends and Vue 3 / Nuxt frontends — Telegram bots & mini-apps, browser extensions and modern web applications.

I also work with Node.js and Nest.js for backend services alongside PHP/Laravel, and write clean, functional and user-centric code.

- Shipped production apps: event platform Rocker.am, equipment rental platform Rentall.am, artist portfolio AraxAlice.com and Telegram assistant SheriffBot.
- Built Telegram bots and mini-apps with scheduling, moderation, AI chat summaries, analytics and a content calendar.
- Developed Chrome extensions: Volume Max sound booster and the LinkedIn Recruiter Toolkit bulk resume/CSV exporter.
- Solid foundation in PHP/Laravel, MySQL, Redis, REST APIs, Git and Linux-friendly tooling.
- Also experienced with Node.js and Nest.js for backend services.

PROFESSIONAL EXPERIENCE

Freelance · Own products — Full Stack Developer

2026

- Design and build full-stack web applications — Laravel/PHP REST backends with Vue 3, Nuxt and Inertia.js frontends, MySQL and Redis (Rocker.am, Rentall.am, AraxAlice.com).
- Develop Telegram bots and mini-apps: SheriffBot with post scheduling, anti-spam moderation, AI-powered summaries, analytics and a visual content calendar.
- Ship browser extensions used by real users: Volume Max audio booster and the LinkedIn Recruiter Toolkit resume/CSV exporter.
- Integrate payment flows, admin panels (Filament/Livewire) and third-party APIs where the product needs them.

Technologies: PHP, Laravel, Vue 3, Nuxt, Inertia.js, Tailwind CSS, MySQL, PostgreSQL, Eloquent ORM, CI/CD, PM2, PHPUnit, Laravel Horizon, Redis, Telegram Bot API, Git

SW Development — Full-Stack Developer

2025 – Present

- Restored a hacked scientific-topic website — closed all security holes and removed a backdoor. The site was under constant attack from bots and users attempting to break into the admin panel, so I restricted external requests at the Nginx level. Also added a significant amount of new functionality and continue to maintain and support the project.

Technologies: PHP, Wordpress, JavaScript, Nginx, Linux, Git, MySQL

AML Incubator — Full-Stack Developer

2024 – 2025

- Built a course creation and sales platform (with a blog) for AML training courses.
- Developed a resort/leisure-zone site with room reservation based on real-time availability, plus tour, activity, and restaurant booking.
- Implemented mass mailing to all registered users.
- Deployed and configured Linux VPS environments with Nginx.

Technologies: PHP, Laravel, Inertia, Vue, Nuxt, MySQL, Eloquent ORM, CI/CD, PM2, PHPUnit, Redis, Git, Nginx, Linux

Webex Technologies — Backend Developer

2023 – 2024

- Led the complete refactoring and migration of a legacy PHP 5.2 application to Laravel 10, improving system security, maintainability, and code quality.

Technologies: PHP, Laravel, MySQL, Git, Eloquent ORM

EliteDevSquad — Full-Stack Developer

2021 – 2023

- Engineered a geolocation-based dating platform with real-time location matching and user discovery features.
- Developed an HR tool to automate the interview process: inviting a candidate to the next interview stage via email with a single click, allowing HR to leave comments at each stage, and with one click either advancing the candidate to the next stage or rejecting them.
- Contributed across multiple concurrent client projects covering frontend, backend, and database work.

Technologies: PHP, Laravel, JavaScript, MySQL, Eloquent ORM

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript, Vue 3, Nuxt, Vuex, Pinia, Inertia.js, Alpine.js, Tailwind CSS, Bootstrap

Backend: PHP, Laravel, Node.js, Nest.js, Inertia.js, Filament, Livewire, SQL, REST APIs

Tools & data: MySQL, PostgreSQL, Redis, Git, Telegram Bot API, Browser Extensions
